PROFESSIONAL SUMMARY

Senior Flutter Developer with 2+ years of experience engineering cross-platform mobile applications using BLoC, Riverpod, and advanced native Android integrations. Specialized in delivering production-ready, offline-first ERP solutions, native Android location intelligence systems, and complex push notification infrastructures. Proven track record of optimizing application performance through multithreading and custom native communication architectures.

PROFESSIONAL EXPERIENCE

Flutter Developer

Feb 2025 – Apr 2026

SpiralCode Innovates LLP, Kochi, Kerala

- Architected and delivered an enterprise-grade Flutter ERP application comprising 5+ core operational modules: geofencing, multichannel sales, attendance tracking, streamlined push alerts, and photo-verification components.
- Engineered a native GPS telemetry module leveraging custom Android background services, Room DB, and a Kalman filtering algorithm running on isolated background threads to minimize hardware tracking drift.
- Executed robust state management using BLoC and Riverpod patterns across 20+ application screens and business workflows, utilizing intelligent caching and transactional FCM payloads for instant ERPNext data synchronization.
- Deployed an offline-first architecture using Hive local storage and intelligent sync queues alongside Flutter Local Notifications to preserve 100% local data integrity across zero-network environments.
- Optimized application stability across production deployment cycles by integrating 5+ Firebase ecosystem services, including Crashlytics, Remote Config, App Distribution, and Analytics alongside systematic Sentry error logging to enable automated error tracking and streamlined issue resolution.
- Managed the complete Google Play Store release cycle across multiple production releases, implementing rigorous app size optimization strategies, closed beta testing pools, and staged rollout plans.
- Collaborated with UI/UX designers to translate complex wireframes and high-fidelity mockups into fluid, single-codebase mobile interfaces, reducing user navigation steps across core modules.

Junior Android Developer

Nov 2022 – Oct 2023

Nizzcorp, Malappuram, Kerala

- Spearheaded an employee management application using Flutter and Firebase, enabling workforce tracking and centralized real-time attendance monitoring panels supporting 100+ active field personnel.
- Constructed a high-scale sales management system with React.js, Node.js, and a PostgreSQL backend that reliably processed 5,000+ production database queries daily with maximum system uptime.
- Optimized software quality assurance workflows, accelerating debugging cycles by resolving 40+ reported system anomalies through systematic production monitoring and the orchestrated deployment of critical hotfixes.

CORE SKILLS

- **Languages:** Dart, Kotlin, SQL, JavaScript, TypeScript
- **Frameworks & Libraries:** Flutter, Jetpack Compose, Dio, React, Next.js
- **Architecture & State Management:** Clean Architecture, BLoC, Riverpod, MVVM, Isolates & Multithreading
- **Cloud & Native Capabilities:** Firebase (FCM / Push Notifications, Crashlytics, Remote Config), Flutter Local Notifications, Geofencing, Razorpay Payment Gateway, REST APIs
- **Databases & Hardware Integration:** Hive, SQLite, PostgreSQL, Room DB, Custom Native Bridges (MethodChannel), Camera & Media Handling
- **Tools, DevOps & Optimization:** Git, GitHub, Postman, Android Studio, App Size Optimization, Docker, CI/CD (GitHub Actions)
- **Design Tools:** Figma, XMind
- **Soft Skills:** Agile Development, Cross-functional Collaboration, Analytical Reasoning, Technical Documentation

PROJECTS

Cake Nook

Jan 2026 – Jun 2026

Full-Stack Freelance Contract — cakenook.in

- Built a full-stack e-commerce web platform using Next.js, React, and Tailwind CSS designed around 3+ target categories: custom event bakery orders, party planning setups, and personalized surprise services.
- Integrated Google Maps API mapping layers to formulate distance boundaries and precise geofencing rules, implementing delivery validation constraints and calculating real-time shipping overheads during checkout.
- Consolidated a secure Razorpay payment gateway pipeline to manage end-to-end user transactions, implementing clean asynchronous verification workflows to confirm successful order placement states.

Location Tracker Plugin (Flutter + Kotlin)

github.com/shuhaibkt02/location_tracker

Custom Flutter plugin for persistent location monitoring integrating Room DB, Kalman filtering, and Android foreground services

- Constructed a native Kotlin foreground service with Room DB persistence and Kalman filtering algorithms to substantially reduce hardware tracking variance during continuous field operations.
- Devised a FIFO-based location history management engine and integrated Firebase error logging to guarantee stable, low-latency background plugin execution.
- Created specifically for ERP field workflows to provide accurate, distance-based system-driven reporting metrics and reliable background telemetry pipelines.

Personal Portfolio Website

shuhaibkt.vercel.app

Modern, responsive web portfolio showcasing production applications and cross-platform technical expertise

- Built a responsive web portal using Next.js, React, and Tailwind CSS, leveraging server-side rendering for optimal asset performance and SEO discovery.
- Created an interactive portfolio showcase featuring category-based filtering, asset optimization, and a mobile-first responsive design strategy.

EDUCATION

Bachelor of Computer Applications (BCA)

2019 – 2022

Jaipur National University

ACHIEVEMENTS & LEADERSHIP

- Formulated complete high-level system architecture blueprints for production ecosystems, designing both frontend mobile clients and backend sync layers before code construction.
- Successfully published production-grade cross-platform applications to the Google Play Store console, managing continuous verification workflows and operational updates.
- Mentored junior mobile engineering professionals and tech interns on robust Flutter design paradigms, Clean Architecture, and reactive architecture paradigms.
- Authored and optimized Android native-to-Dart communication layers using MethodChannels, enabling reusable platform integrations across enterprise applications.
