Professional Summary

Software Engineer with 3+ years of experience developing cross-platform mobile and web applications specializing in Flutter, React.js, Next.js, Kotlin, and TypeScript. Experienced delivering ERP, logistics, and hyperlocal marketplace solutions with expertise in offline-first architecture, geofencing, real-time navigation, native Android integration, Google Maps Platform, SEO, Server-Side Rendering (SSR), Core Web Vitals optimization, and REST API integration.

Professional Experience

Independent Software Engineer (Freelance)

Client: Cake Nook | Frontend Developer

Jan 2026 – Jun 2026

- Developed responsive customer-facing interfaces for a multi-vendor hyperlocal marketplace using Next.js, React.js, TypeScript, and Tailwind CSS, supporting desktop, tablet, and mobile.
- Implemented the complete purchase flow, including product browsing, cart, checkout, order placement, and client-side authentication.
- Integrated Razorpay for secure online payments, enabling a smooth end-to-end checkout experience.
- Implemented geo-boundary validation using Google Maps Platform to verify delivery eligibility across multiple vendor service zones.
- Optimized Core Web Vitals using Server-Side Rendering (SSR), image optimization, lazy loading, code splitting, font optimization, caching strategies, and JavaScript bundle optimization to improve SEO and page performance.
- Integrated REST APIs in collaboration with backend developers to deliver production-ready marketplace features.

Client: Inquisyx | Flutter Developer

Feb 2026 - May 2026 (Contract)

- Redesigned core UI/UX flows with modern, responsive layouts and smooth animations across key user journeys.
- Developed offer discovery, offer details, offer unlocking, and purchase workflows, along with user journey tracking.
- Implemented real-time navigation using Google Maps Platform — live location tracking, route rendering, automatic route recalculation, and destination guidance.
- Implemented geofencing-based journey validation with progress tracking, ensuring journeys could only be marked complete after users physically reached the destination; added purchase reporting and review workflows.
- Added validation checks for user-generated private offers to prevent prohibited listings, while resolving production issues and improving app responsiveness and performance.

Flutter Developer — SpiralCode Innovates LLP

Feb 2025 – Dec 2025

- Delivered 6 production Flutter applications for enterprise clients, utilizing BLoC for core long-term architectures and Riverpod for rapid MVP prototyping to maximize delivery speed.
- Designed Flutter applications following Clean Architecture principles to improve maintainability and scalability.
- Designed and implemented an offline-first architecture using Hive with background synchronization, ensuring reliable data capture for field staff working in low-connectivity conditions.
- Implemented native Android integrations using Kotlin, MethodChannels, and background location services to support continuous field tracking.
- Integrated REST APIs, Firebase (Cloud Messaging, Crashlytics, Analytics, Remote Config, App Distribution), Google Maps Platform, Ola Maps, and Sentry to support real-time communication, monitoring, and location-based functionality.
- Automated application build and deployment workflows using GitHub Actions and Fastlane, and managed Google Play Console releases across multiple release cycles.
- Developed Widget Tests for critical Flutter UI components to improve application reliability.
- Collaborated with UI/UX designers and backend developers in Agile Scrum teams to deliver production-ready mobile applications through sprint-based development.

Freelance Frontend Developer

May 2024 – Jan 2025

- Developed a responsive business website for a local client using React.js.
- Designed and developed a sales tracking web application for managing salesperson activities, customer records, and sales workflows.
- Developed responsive user interfaces and integrated backend REST APIs.
- Worked directly with the client to gather requirements and refine business workflows.

Junior Software Developer — Nizzcorp

Nov 2022 – Oct 2023

- Developed a Flutter-based employee management application with automated task assignment driven by employee schedules and working hours.
- Developed a field sales management application (React.js, Node.js, MongoDB, PostgreSQL) for order management, billing, and sales reporting.
- Designed and integrated REST APIs supporting frontend and backend business workflows.
- Engineered a custom drag-and-drop ERP page builder (HTML, CSS, JavaScript), enabling non-technical users to visually assemble ERP pages without developer assistance.
- Developed reusable UI components including text fields, tables, buttons, images, and input forms.
- Designed an SVG-based component serialization system with JSON persistence for efficient storage and rendering.
- Collaborated with the development team on new features, bug fixes, and maintenance of production applications.

Technical Skills

- **Languages:** Dart, Kotlin, JavaScript, TypeScript, SQL
- **Mobile Development:** Flutter, Android SDK, Kotlin, MethodChannel, BLoC, Riverpod, Clean Architecture, Background Services, Geofencing
- **Frontend:** React.js, Next.js, HTML5, CSS3, Tailwind CSS
- **Web Performance:** Server-Side Rendering (SSR), SEO, Core Web Vitals, Code Splitting, Lazy Loading
- **Backend:** Node.js, Express.js, REST APIs
- **Databases & Storage:** PostgreSQL, MongoDB, SQLite, Hive, Room DB, Firebase, Supabase
- **Cloud & Third-Party Services:** Firebase (FCM, Crashlytics, Analytics, Remote Config, App Distribution), Google Maps Platform, Ola Maps, Razorpay, Sentry
- **Testing:** Flutter Widget Testing
- **Tools & Platforms:** Git, GitHub, GitHub Actions, Fastlane, Postman, Android Studio, Google Play Console, Figma
- **Methodologies:** Agile/Scrum, CI/CD

Selected Projects

Location Tracker Plugin (Flutter + Kotlin)

- Developed a reusable Flutter plugin for persistent background location tracking, used across multiple ERP field applications.
- Implemented Android foreground services, Room DB, Kotlin MethodChannels, and Kalman filtering to smooth out noisy GPS data and improve tracking accuracy.
- Implemented FIFO-based location history management, keeping storage bounded while retaining recent tracking data for field operations.
- GitHub: github.com/shuhaibkt02/location_tracker

Personal Portfolio

- Developed a responsive portfolio website (Next.js, React.js, Tailwind CSS) showcasing projects, technical skills, and professional experience with a mobile-first design.
- Portfolio: <https://shuhaibkt.vercel.app>

Education

Bachelor of Computer Applications (BCA)

Jaipur National University

2019 – 2022
